Stock Symbol:

Heart Force Medical Inc. (HFM) is developing the digital Ballistocardiograph (dBG), a non-invasive medical device that assesses cardiac function by sensing forces generated as a result of heart muscle contractions. These forces are captured by accelerometers which are enclosed in a sensor placed on the chest at the lower end of the sternum.

**Products and Services**

In November 2008 Health Canada approved HFM's dBG application. HFM is currently in negotiations with the FDA on US clearance. Recently volunteer studies have further demonstrated that HFM's technology offers a reproducible and reliable method for the assessment of cardiac function.
